

# SKIN PLUS

PROBIOTIC SKIN CREAM

## PROPERTIES

- The prebiotics and probiotics in the composition are 100% natural
- Low risk for germs and bad infections
- Anti-inflammatory effect
- Helps treat symptoms caused by:

Eczema  
ACNE  
PSORIASIS

- Skin barrier repair

## PACKAGING

30ml HDPE bottles

## DESCRIPTION

SKIN PLUS skin care product contains a high concentration of probiotics and prebiotics. Probiotics reduce the risk of infections and install a good protective microbiome on the skin. Prebiotics support and stimulate growth and activity of natural bacteria of good skin.

Furthermore, probiotics are active dirt removers that clean skin at the microscopic level. This leads to a permanent cleaning of the skin and therefore a smooth and healthy skin.

The main goal is to prevent an unhealthy skin microbiome. Because SKIN PLUS actively adds a large number of good bacteria (probiotics) and stimulates the growth of good existing skin bacteria by prebiotics, a very stable and healthy microflora is formed and maintained.

Many skin problems such as acne, eczema and psoriasis are related to an inflammatory reaction (inflammation) of the skin as a result of allergies, infections or underlying conditions. Research conducted in the USA (North Carolina) have shown that SKIN PLUS reduces the inflammatory response.

In particular, the production of IL-1 $\beta$ , IL-8 and TNF- $\alpha$  has been reduced. These are chemicals (cytokines / chemokines) that the body produces to cause inflammation.

SKIN PLUS includes the probiotic *Bacillus subtilis*, which produces very active certain biosurfactants, called surfactants. These surfactants have a proven anti-inflammatory effect. This anti-inflammatory effect provides less itching and redness in many skin conditions.

## ATTENTION!

Store the products between 5°C and 45°C.
